# **Energy performance certificate (EPC)**

## **Energy rating and score**

This property's energy rating is E. It has the potential to be C.

See how to improve this property's energy efficiency

The graph shows this property's current and potential energy rating.

Properties get a rating from A (best) to G (worst) and a score. The better the rating and score, the lower your energy bills are likely to be.

For properties in Northern Ireland:

- the average energy rating is D
- the average energy score is 60

## Breakdown of property's energy performance

### Features in this property

Features get a rating from very good to very poor, based on how energy efficient they are. Ratings are not based on how well features work or their condition.

Assumed ratings are based on the property's age and type. They are used for features the assessor could not inspect.

| Feature              | Description                                    | Rating    |
|----------------------|--|-----------|
| Wall                 | Solid brick, as built, no insulation (assumed) | Poor      |
| Wall                 | Cavity wall, as built, no insulation (assumed) | Poor      |
| Roof                 | Pitched, 200 mm loft insulation                | Good      |
| Roof                 | Roof room(s), ceiling insulated                | Poor      |
| Window               | Fully double glazed                            | Average   |
| Main heating         | Boiler and radiators, oil                      | Poor      |
| Main heating control | Programmer, TRVs and bypass                    | Average   |
| Hot water            | From main system, no cylinder thermostat       | Very poor |
| Lighting             | Low energy lighting in all fixed outlets       | Very good |
| Floor                | Suspended, no insulation (assumed)             | N/A       |
| Floor                | Solid, no insulation (assumed)                 | N/A       |
| Secondary heating    | None   | N/A       |

### Primary energy use

The primary energy use for this property per year is 294 kilowatt hours per square metre (kWh/m2).

About primary energy use

#### **Additional information**

Additional information about this property:

· Cavity fill is recommended

# How this affects your energy bills

An average household would need to spend £2,786 per year on heating, hot water and lighting in this property. These costs usually make up the majority of your energy bills.

You could save £1,459 per year if you complete the suggested steps for improving this property's energy rating.

This is **based on average costs in 2024** when this EPC was created. People living at the property may use different amounts of energy for heating, hot water and lighting.

## Impact on the environment

This property's environmental impact rating is F. It has the potential to be D.

Properties get a rating from A (best) to G (worst) on how much carbon dioxide (CO2) they produce each year.

#### Carbon emissions

| An average household produces        | 6 tonnes of CO2    |
|--------------------------------------|--------------------|
| This property produces               | 12.0 tonnes of CO2 |
| This property's potential production | 5.3 tonnes of CO2  |

You could improve this property's CO2 emissions by making the suggested changes. This will help to protect the environment.

These ratings are based on assumptions about average occupancy and energy use. People living at the property may use different amounts of energy.

# Changes you could make

▶ Do I need to follow these steps in order?

| Step 1: | Cavity | v wall i | nsulation |
|---------|--------|----------|-----------|
|---------|--------|----------|-----------|

| Typical installation cost                | £500 - £1,500 |
|--|---------------|
| Typical yearly saving                    | £96           |
| Potential rating after completing step 1 | 41 E          |

### Step 2: Hot water cylinder insulation

Increase hot water cylinder insulation

| Typical installation cost                       | £15 - £30 |
|---|-----------|
| Typical yearly saving                           | £36       |
| Potential rating after completing steps 1 and 2 | 42 E      |

## Step 3: Room-in-roof insulation

| Typical installation cost                      | £1,500 - £2,700 |
|--|-----------------|
| Typical yearly saving                          | £540            |
| Potential rating after completing steps 1 to 3 | 55 D            |

### **Step 4: Floor insulation (suspended floor)**

| Typical installation cost                      | £800 - £1,200 |
|--|---------------|
| Typical yearly saving                          | £117          |
| Potential rating after completing steps 1 to 4 | 57 D          |

## Step 5: Replace boiler with new condensing boiler

| Typical installation cost                      | £2,200 - £3,000 |
|--|-----------------|
| Typical yearly saving                          | £585            |
| Potential rating after completing steps 1 to 5 | 70 C            |

### Step 6: Replacement glazing units

| Typical installation cost | £1,000 - £1,400 |
|---------------------------|-----------------|
| •••                       |                 |

| Typical yearly saving                          | £86  |
|--|------|
| Potential rating after completing steps 1 to 6 | 72 C |

### Step 7: Solar water heating

| Typical installation cost                      | £4,000 - £6,000 |
|--|-----------------|
| Typical yearly saving                          | £64             |
| Potential rating after completing steps 1 to 7 | 74 C            |

### Step 8: Internal or external wall insulation

| Typical installation cost                      | £4,000 - £14,000 |
|--|------------------|
| Typical yearly saving                          | £79              |
| Potential rating after completing steps 1 to 8 | 76 C             |

### Step 9: Solar photovoltaic panels, 2.5 kWp

| Typical installation cost                      | £3,500 - £5,500 |
|--|-----------------|
| Typical yearly saving                          | £518            |
| Potential rating after completing steps 1 to 9 | 83 B            |

#### Help paying for energy improvements

You might be able to get a grant from the Boiler Upgrade Scheme (https://www.gov.uk/apply-boiler-upgrade-scheme). This will help you buy a more efficient, low carbon heating system for this property.

### Who to contact about this certificate

### Contacting the assessor

If you're unhappy about your property's energy assessment or certificate, you can complain to the assessor who created it.

| Assessor's name | Jonathan Apsley      |
|-----------------|----------------------|
| Telephone       | 07918552899          |
| Email           | mark160663@gmail.com |

### Contacting the accreditation scheme

If you're still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

| Accreditation scheme | Elmhurst Energy Systems Ltd |  |
|----------------------|-----------------------------|--|
|----------------------|-----------------------------|--|

| Assessor's ID | EES/023185                     |
|---------------|--------------------------------|
| Telephone     | 01455 883 250                  |
| Email         | enquiries@elmhurstenergy.co.uk |

#### About this assessment

| Assessor's declaration | No related party |
|------------------------|------------------|
| Date of assessment     | 4 June 2024      |
| Date of certificate    | 4 June 2024      |
| Type of assessment     | ► <u>RdSAP</u>   |
